"This is really a big deal, and it gets in the middle of a lot of existing work," Alemena says. "The fact that this is applied to the creation of imagery is definitely a major step forward." Other than an improved version of the Touch Up Board and some new edge tools, the major new feature is Content Aware Fill. It works by analyzing the RGB bands in an image to recognize objects and then fills the background in a way that makes the contents of the objects prominent. For the curious, there are also a handful of new filters. Those who love the "old" Photoshop probably won't be thrilled by the update. Sure, some of the changes are minor, but since they're so new and there's so much potential, it's too early to decide what will change and what won't. For now, at least, you can still get the former version for Mac and Windows. Of the top ten features, Development Tools gets the first five nod. The ability to Object Snap to other objects in the Document window, Upgrade to Adobe XD, and the ability to edit smart objects are nice touches. If you're a web designer, the option to access Sketch (the vector tool for web designers) is also pretty handy. It's also worth mentioning that the update includes a few more privacy-related features, including one that lets you control

what is disclosed about your photo and the status of an image when it is shared.
