But as you can see in the sample images, they do not appear to be acceptable to Lightroom. The baked-on effect is very distracting, and even when I was testing early in the beta stages I couldn't get the rendering to be objective. I am not in a position to provide an updated list of official X-Trans RAW settings in Lightroom. I have included that information in the "Fujifilm X-Trans RAW Conversion" section at the end. I hope that this may be a step in the right direction and that Adobe engineers will go further. Stay tuned.
