There are a couple of limitations to using Adobe Photoshop Sketch. First, I'm working in a Windows environment, so I'm unable to test the iPad Pro natively with Photoshop Sketch. That said, I did use the iPad Pro with Photoshop on an Apple Mac in my office, and I also used it with a PC version of Photoshop, as well as the web app. In that first instance, I used a MacBook Pro with macOS Mojave, and it worked with the iPad Pro just fine, creating a document just as a Mac would have. I also experimented with creating a document with the web app version of Photoshop. The final file I created showed up in the canvas, and the iPad allowed me to use the tools just as I would on a Mac, including the pen. I was able to edit shapes using the various tools, changing the size of a shape or adjusting it with the Shape tools. I'm impressed by how well the iPad Pro and Photoshop Sketch work together. Yes, the images I created were created entirely with the pen, but it was a smooth and easy process to get into the workflow and quickly create meaningful results. The iPad Pro controller is a perfect tool for sketching, and the new image-editing experience across the board is an impressive new way to work. In my own experience in LR5.2 release candidate testing with my Nikon D800, I have been able to open a PSD file that was exported on v5. Coming from LR4 where I have been using a D3x00 for a few weeks the D800 now is a breeze to open. I did have to turn off the smart previews and use the integrated layer-based previews. This used to be a time consuming bitch previously. The biggest hurdle with the D800 is still the filesize of the NEFs. This just file size card is strapped to the D800. It is difficult to even move "raw" files that are large than the D800 memory card. At current this just stinks. What is really different is the ability to open export files in LR. Before export to the D3x00 I and many others were either using an external drive or just did 24 bit exports from LR. At times that was a pain in the ass. But with export to D3x00 the file size is far less aggravating now. I can even shoot raw images from my D3 and create other raw files for both studio and anywhere use after export to D3.
