Together, Adobe introduced an all-new editing work space called Share for Review to provide a common workspace between desktop and mobile, empowering users to collaborate on projects without leaving Photoshop and share them with their team. Share for Review enables customers to quickly open and collaborate on creative projects collaboratively in Photoshop, which enables customers to work on multi-user projects simultaneously across the desktop and the web, whether they are in the field or at home. Share for Review recognizes collaborators based on claimed ownership of a project, enabling Photoshop to detect who created which part of a project and which tools are being used. At MAX, Adobe also announced new features in Photoshop that'll make the flagship editor even more intuitive and easier to use for everyone. New tools include:

- *customization* - Click the eyedropper tool to apply one of a variety of preset colors, or change the color directly in the histogram.
- *explode selections* - Expand and fill your selection with the selected range, to extract all objects inside the selection.
- *rotate* - Click the flip tool to rotate the appearance of an image.
- *undo and redo* - You can now instantly undo or redo any action in Photoshop. The action history helps users navigate through the edit history.
- *brightness and contrast* - Adjust the luminance of an image, and easily keep the conversions consistent.
- *levels* - Use the new levels selection tool to easily adjust the grayscale of an image. It is based on the *select* tool and works with any path, as well as with the *mask* tool.
- *Delete and Fill* - Quickly remove or replace the selected objects with a new selection.

These new features provide a wide array of editing capabilities to help make it faster and easier to create, experiment and collaborate.

This transition to the new native APIs is significant. Photoshop has had to work around GPU scaling issues for years, and has relied on vmpalette native handling to do this for the GPU. Now that chrome rendering has been sunsetted, and browsers are moving to new native APIs, we can remove the reliance on vmpalette and use native APIs to provide GPU-accelerated results. This can be a significant win, as it is resource intensive to render to vmpalette, and in a browser, performing this is overkill. By leveraging Direct3D in native APIs, we can harness 4x GPU rendering efficiency versus vmpalette, which scales only on GPU constrained systems. The Direct3D APIs also offer a high degree of control, allowing us to handle aspects of the rendering pipeline (post-processing) or polish rendering in ways beyond what was possible on GCN with vmpalette. Besides removing legacy GPU scaling, there is still much left to do to bring the new native GPU APIs to life. In the current release, this requires significant rebuilding back-end infrastructure to ensure that the final product works with all the features, and the target GPU platform. In the first release, this will mean many related components, like packing and compression, will need to be rebuilt at the same time and are not yet mature. The first release will also focus on the major features as more of the build and test process is complete. With the broad update announced today, we now can plan for a final release of Photoshop as a preview app when it launches in the fall. The team is looking forward to working with the community to bring this native and hardware accelerated preview to the world.

Adobe Photoshop is the best overall photo editing software in terms of features, price, and ease of use. It's a huge topic, so we won't cover it all here, but let's look at some of the tools and innovative features that make the Adobe Photoshop the professional's standard. Some features in this version include the introduction of a tool called "Deep Envelope." That tool lets you create very detailed, original look, a feature that is most significant to high-end designers. Adobe Teams is a collaboration solution that allows creators to work together on an integrated project, sharing files visually, without the need to email large files back and forth during the design and creation process. The ability to collaborate without worrying about how to get large design files uploaded and accepted has saved me hours of time, and the saving of all project files should speed up the project timeline. We tested the Mac application's Basic subscription plan by creating a project and demoting it to a client or family member. As part of the tour, we should have noticed the Smart Sync feature, the ability for users to keep a version history of their files. You could be forgiven for thinking that this year at Adobe MAX would find artist Achewood co-creator and cartoonist Sam Alden announcing new features for Photoshop on stage. It was, in fact, Illustrator guru and host of the Illustrator Secrets podcast Pat Beaty who first announced that Photoshop was transitioning to a new native APIs.
